

Checklist before you start your own recycling workspace in garage

10 points that I recommend to think about before renting / buying a garage for the purpose of creating a workshop for recycling plastics.

1.	Is there enough space in the garage for what you plan to do? - make at least a basic sketch, or try the Layout tool in MS PowerPoint.
2.	Is the locality of the garage easily accessible? - on foot / by car / bus (check connection)
3.	Is the electrical grid in the garage suitable for your activities? You can find it by the labels on the devices: power [W], supply voltage [V]
4.	Are local thefts common? Security is in place.
5.	Pay attention to the condition of the interior, if during the inspection you find that the roof is leaking, you have another problem.
6.	Compare rental prices in the area.
7.	View the condition of the lighting, the location of the sockets and switches. If the current situation is not enough for you, set aside part of the budget.
8.	Are there nearby toilets?
9.	Is the garage well insulated? Possible heating is a plus, otherwise expect expenses for insulation and stoves during the winter.
10.	If you are renting, will the garage owner not mind what you plan to do there?

If you don't have a problem with anything mentioned, nothing big should surprise you. Good luck!
